

# $\begin{array}{c} Valsartan\ and\ Hydrochlorothiazide\ Analyzed\ with\ HPLC\ -\ AppNote \end{array}$

# **Improved Gradient Method with Faster Equilibration**

The USP Assay Method for Valsartan in combination with Hydrochlorothiazide features a 27 minute gradient with a 13 minute re-equilibration for a total run time of 40 minutes. In this method, the run time was a quarter of the USP method, and the Column equilibrates much faster when gradients are used. This demonstrates a substantial time and solvent savings for the analytical laboratory.

Five Chromatograms are overlaid below which shows the Robustness and Precision of this Method.

**Peaks:** 

# 1. Hydrochlorothiazide (HCT)

2. Valsartan

## **Method Conditions**

**Column**: Cogent Bidentate C18<sup>™</sup>, 4μm, 100Å

**Catalog No.**: 40018-75P **Dimensions**: 4.6 x 75mm

Mobile Phase:

A: DI Water / 0.1% Trifluoroacetic Acid (TFA) B: Acetonitrile / 0.1% Trifluoroacetic Acid (TFA)

#### Gradient:

Time (minutes)	%B
0	10
8	90
9	10

Post Time: 1 minute Injection vol.: 10µL

Flow rate: 1.0ml / minute Detection: UV @ 265nm

#### **Sample Preparation**:

Stock Solution: A Diovan® HCT brand tablet containing 160mg Valsartan and 25 mg Hydrochlorothiazide was ground and added to a 50 mL volumetric flask. The flask was diluted to mark with 50:50 Solvent A / Solvent B mixture and sonicated. A portion was then filtered with a 0.45µm Nylon Syringe Filter AQ™ Brand (MicroSolv Tech Corp.).

Working Solution: 100µL of the stock solution was diluted with 900µL of a 50:50 Solvent A / Solvent B mixture.

### to: 1 minute
