

## What is the pressure limit of the stainless steel filter sparging stones – FAQ

**All the sparging stone products are rated to a maximum pressure of 1,000 bar used under standard conditions.**

However, it is important to note that the tubing used and the connection of the tubing to the device may not perform at this pressure rating. The limiting pressure factor of a filter sparging stone is not for the filters / spargers, but for the connections.
