

How to define custom plate measurements for the U-2D Micro-Sample Management System in the Waters Acquity console software – How to

It is always best to consult the user manual for any changes or options before making adjustments to you instruments.

The Waters Acquity[™] UHPLC chromatography software is programmable for X,Y,Z sampling. The pre-existing configurations are pre-programmed and stored for customers to get up and running fast. The system expects to hit resistance within some tolerance of the configured heights, or it will error. This is a 'fail-safe' to prevent damage to the autosampler if the user had the wrong configuration plate or vial loaded into the sample method.

If you want to set a custom plate, an example would be taking a 1ml ANSI plate that has a 7mm ID well, a 27mm depth, and a height of 31mm. If you bring up a plate, modify the dimensions and save it as another name, you should be all set. See below.

The U-2D[™] plate is ANSI/SLAS (Society For Laboratory Automation and Screening) compliant and conforms to SBS standards and follows the ANSI/SLAS Microplate Standards and when the Rack and Base are mated is virtually indistinguishable from existing glass insert 96 Formatted well plates (and similar).

ANSI/SLAS Microplate Standards (ANSI/SLAS 1 to 4 - 2004)

Mechanical Drawings Defining Height Of A Typical Microplate

The Society For Laboratory Automation And Screening (SLAS) is not a standardizing organization; they are a society that provides a working group the ability and platform to standardize along with the American National Standards Institute (ANSI).

Dimensions of the U-2D plates:

Modify X, Y, Z:

1. Using the blue arrows at the top, click through the different plates that are already programmed.

- 2. Click Rack > New Rack to save new plate types.
- 3. Modify any of the dimensions
- 4. Click Rack > Save Current Rack
