

1,4-Benzodiazepines in Urine Analyzed with ANP – AppNote

1,4-Benzodiazepine compounds from Urine Samples were analyzed successfully after Solid Phase Extraction (SPE).

Four available Compounds (*shown below*) were well retained and separated. The procedure could be used for determination of this class of compounds in urine samples and other body fluids.

Samples:

Extraction method: Spiked urine sample was loaded into SPE cartridge I (Clean Screen Xcel™ purchased from UCT Bristol, PA, USA) and eluted with 0.78mL of acetonitrile, 200µL of 2-propanol, 20µL of ammonia.

After the elution, the sample was dried under N₂ gas and dissolved in 100µL of 50:50 methanol / DI H₂O / 0.1% formic acid.

NOTE: Before injection, the 10 ppm spiked sample was filtered through a 0.45µm AQ™ Brand Nylon Syringe Filter (MicroSolv Tech Corp).
