

Capillary storage in capillary electrophoresis - How To

When storing a capillary after use, follow these simple instructions to increase the capillary life.

1. Filter all solutions to be used on your capillary with .45 μ or .2 μ filter.
2. Rinse the capillary with .1M NaOH solution for 5 minutes.
3. Rinse the capillary with CEwater or CE grade water for 5 minutes.
4. If possible, blow nitrogen or helium through the capillary prior to storage.
