
How do I store the HPLC column supplied in the HSQ kit?

One of the best features of the MicroSolv HSQ Kit™ is that the kit was designed for ease and speed. The HPLC Column is shipped and stored in the same mobile phase that is used during the testing.

The column is always ready to go with minimal equilibration time. The mobile phase/storage solvents were chosen for long column life. The solutions should be stored at **room temperature** in a dry place and never refrigerated.
