

## What is the useful temperature range of PEEK laboratory products – FAQ

The useful temperature range of PEEK related products for chromatography is up to 100°C (tubing) and up to 125°C (fittings).

PEEK is sometimes rated to 250°C but... It will not be as stable (lower burst pressure for tubing) as it is normally and some solvents may interact stronger than under RT with PEEK.

*PEEK has to be used with caution with higher temperatures.*
