

What is the difference between the Beta Tools and other similar pliers on the market - FAQ

The Beta Tools™ are pairs of **precision** pliers not unlike many others. But what makes them very different from others who try to mimic it are the center holes. These **precision** drilled holes are very difficult to create each and every time as they have to be “dead center” for it to work properly.

Other manufacturers offer similar **precision** pliers with a drilled hole for tubing straightening but their tolerances of “dead center” are often not satisfactory. The Beta Tool™ has been in production for over 25 years and the manufacturing and QC process make it the tubing straightener of choice of labs and service technicians worldwide.
