

What is the pressure limit of the stainless steel filter sparging stones – FAQ

All the sparging stone products are rated to a maximum pressure of 1,000 bar used under standard conditions.

However, it is important to note that the tubing used and the connection of the tubing to the device may not perform at this pressure rating. The limiting pressure factor of a filter sparging stone is not for the filters / spargers, but for the connections.
