

A 10um pore size gives the best air bubbles for carbonation applications, such as carbonated beverages.

A variety of product options are available for 10um sparging stones, such as different diameters and fitting types. In this type of application, they are mostly installed and fixed directly to a sparging line, all with SS tubes and NPT connectors.

Other pore sizes are available upon special request. Please contact our Customer Service Department for details: 1-732-380-8900 between 9 and 5 EST, or send us an email [Customer Service Email](#).
