

Sometimes, you may see a Partisil HPLC column referred to as “ODS.” This means the column has an Octadecyl silane (C18) stationary phase. In addition, you may see ODS followed by a number designation:

**Partisil™ ODS** is a low carbon load C18 phase, with intentionally unbonded surface silanols adding to the selectivity.

**Partisil™ ODS2** is a relatively high carbon load C18 bonded silica phase which makes it the most non-polar and, therefore, the most retentive of the Partisil reversed-phase columns. The high sample load **capacity** is suitable for preparative work.

**Partisil™ ODS3** is an intermediate carbon load C18 phase used for pharmaceutical, natural products, food, biological and environmental pollutants applications.
