

Does MicroSolv have a policy using materials free of BSE and or TSE – FAQ

Yes, as of October 2021, all MicroSolv products are manufactured completely from synthetic or manufactured materials and do not contain any raw materials produced from, or substances derived from animal origin nor do our products come in contact with animal products during storage and transportation therefore all products produced by MicroSolv are free from Transmissible Spongiform Encephalopathy (TSE) and Bovine Spongiform Encephalopathy (BSE). We further declare that our products are Dioxin Free.

For the purposes of this article, TSE is defined as and includes: Bovine Spongiform Encephalopathy (BSE) occurring in cows (mad-cow-disease), the Scrapie Disease in Sheep, as well as the human form: the variant-Creutzfeldt-Jakob-Disease (vCJD).
